

TECHNICAL AND SCIENTIFIC TRANSLATIONS

Perhaps one of the single most important characteristics of our technical civilization is specialization. Engineering and the major branches of science have been subdivided into a multitude of specialized disciplines and fields such as:

- Electrical engineering
- Mechanical engineering
- Chemical engineering
- Environmental engineering
- Aerospace engineering
- Civil engineering
- Nuclear engineering
- Naval engineering
- Optical engineering
- Structural engineering
- Construction engineering

The above disciplines and fields illustrate only a few specific areas; there is even greater diversity in the world of science. Specialization requires unique expertise, and we at 3rdevent have these specialists — professional and competent translators who have mastered the technical language and scientific terminologies of their chosen fields.

An excellent technical/scientific translator must know more than two languages. The translators must also be a subject matter expert in the field of engineering or science in which he/she translates. At 3rdevent, we scrutinize our translators not only for their linguistic abilities, but also for their technical acumen. Additionally, we clearly establish in which fields of science and/or engineering they can translate with expertise and competence.

Contact a 3rdevent representative to learn more about technical and scientific translations or call us at (USA) 1-800-454-3044 (INTL) 312-239-8860.
